

Description

This layout allows users to set up their own filters when displaying list of objects. It can also be used so they can display charts.

Installation

<https://github.com/casewise/cpm/wiki>

Please also note that you need to update an Evolve js file to prevent some errors to be raised :

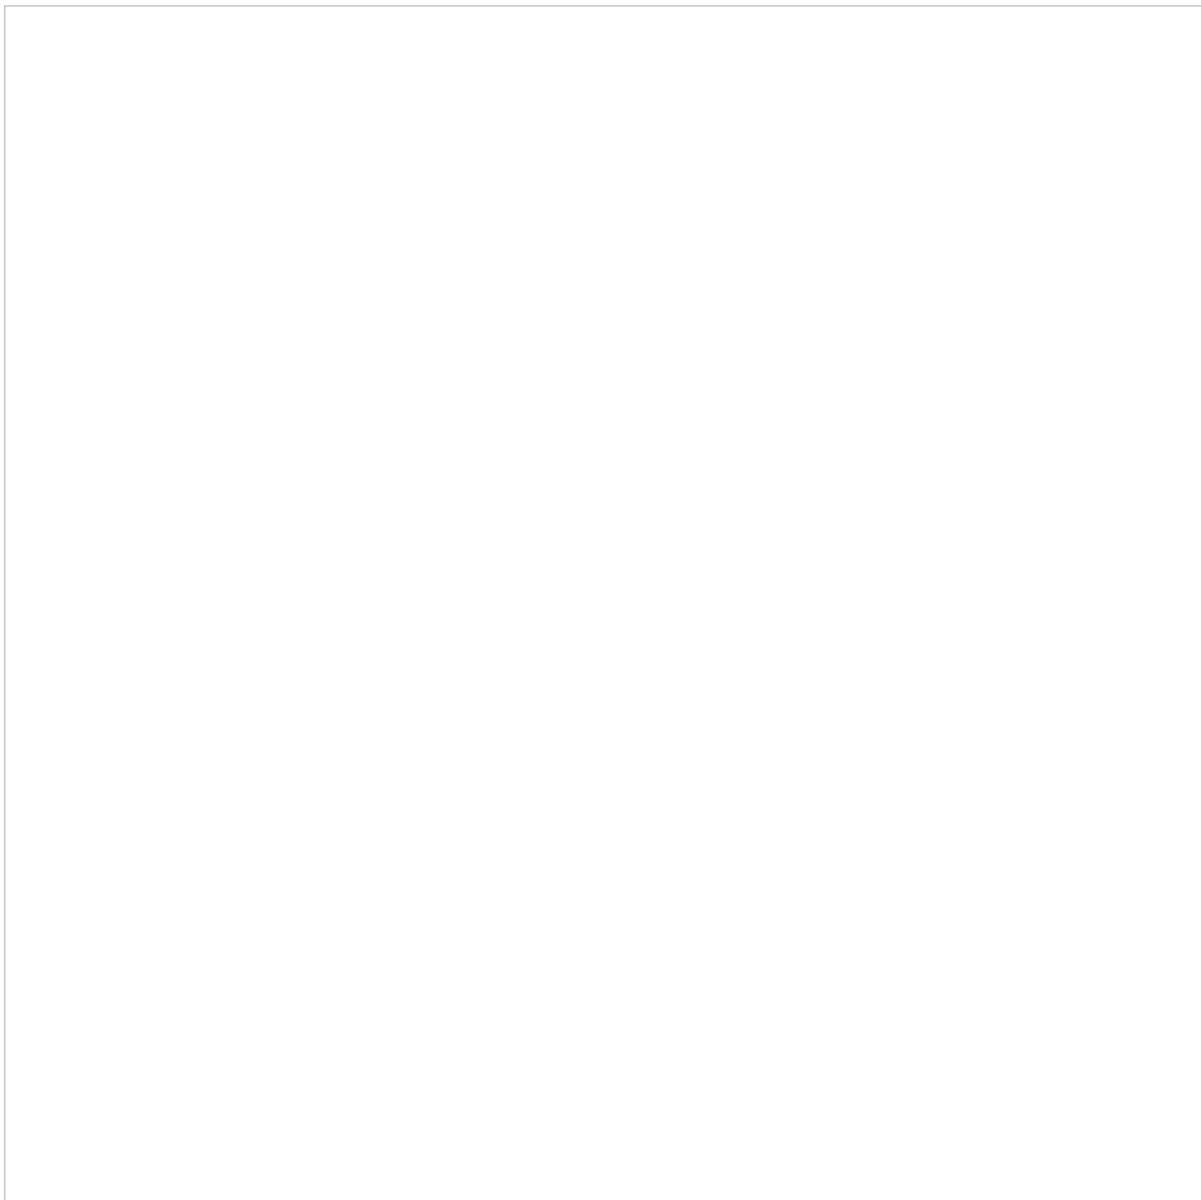

add the following modules to the Angular loader, located in the **webdesigner/libs/cwAPI/CwAngular/CwAngularLoader.js** file :

- ui.bootstrap
- chart.js

To do so, replace `app = angular.module(cwAppName, ['ngDraggable', 'cfp.hotkeys', 'localytics.directives', 'ngSanitize', 'ngAnimate', 'xeditable']);` by `app = angular.module(cwAppName, ['ngDraggable', 'cfp.hotkeys', 'localytics.directives', 'ngSanitize', 'ngAnimate', 'xeditable', 'ui.bootstrap', 'chart.js']);`

How to set up

Create the following structure :

To make a property available in the filters in the user interface, you just need to check it on the `ObjectType` node.

Result

Below is a screenshot of what you get once your layout is deployed.
